UNITED NATIONS/IMO/DOT PERFORMANCE TEST

Report No: S-1307-AL-011318 **Test Type:** Annual Retest

Test Date: 1/13/2018 **Plant:** Alsip, IL, 4300 W. 130th St

Expiration Date: 1/13/2019

Mr. Trevor Davies,

Attached are the laboratory test result sheets of the UN/DOT Performance Test on the steel drums that was conducted at the above stated plant.

These sample containers that were made with the proper components passed the required drop, leakproofness, hydrostatic and compression tests for the following UN Marking(s):

1A1/X1.8/300/YR 1A1/Y2/300/YR 1A1/Z2.7/300/YR

Thank you and best regards.

Notes:

- 1) This information reflects only the components of the sample drums tested and may not reflect all equivalent components of the drums covered under this test.
- 2) See attached closure notification for torque values for applicable rings and plugs on test drum.
- 3) If torque for components are not included on the closure attached, the components are customer supplied and were used for testing. Proper closing of the drum is the responsibility of the shipper.

S77

These instructions for closure are based upon the closure methods used to enable these containers to pass the United Nations test requirements as outlined by the UN marking on the package. This method of closure should be used to ensure that your containers have been closed in the same manner as when they were initially tested. To be UN certified, this drum must be closed with the same plugs used for certification. If the drum is purchased without these parts, contact the supplying Greif plant for the correct components.

Your product may adversely affect container materials, bung threads or closing devices. Product compatibility with the container is the shipper's responsibility.

The closure recommendations do not take into account any hazards present at your facility, or the handling, filling or shipping of your product.

Any container used for packaging hazardous materials should be inspected before filling and shipment. Containers with obvious damage or deterioration should not be filled or shipped.

Plug Closing Instructions:

- 1) Place the plugs into the appropriate bung.
- 2) Turn the plug gently clockwise, making sure that the plug is entering the bung properly.
- 3) Using a torque wrench, tighten the plug according to the manufacturer's recommended torque below.

Drums with plugs closed in this manner have met the UN performance requirement as specified in the container markings.
