**Environmental precautions:**

For larger spills, cover drains and build dikes to prevent entry into sewer systems or bodies of water. Collect the resulting residue containing solution. Place in a metal container approved for transportation by appropriate authorities. Dispose of collected material as soon as possible.

**Methods for material for containment and cleaning up:**

Observe precautions from other sections. Contain spill. Working from around the edges of the spill inward, cover with bentonite, vermiculite, or commercially available inorganic absorbent material. Mix in sufficient absorbent until it appears dry. Collect as much of the spilled material as possible. Clean up residue with an appropriate solvent. Seal the container.

---

### SECTION 7. HANDLING AND STORAGE

**Precautions for safe handling:**

Avoid contact with skin, inhalation of mist, or ingestion. See section 8 for personal protection equipment. Practice good personal hygiene to prevent accidental ingestion after handling. Properly dispose of clothing that cannot be decontaminated.

**Conditions for safe storage, including any incompatibilities:**

Store away from oxidizing materials. Store produce in a closed container located in a dry area. Do not store in open, inadequate, or mislabeled packaging. Check that containers are clearly labeled. Use metal cans, metal drums, plastic, or lined fiber containers. Keep away from heat and flame.

---

### SECTION 8. EXPOSURE CONTROLS/PERSONAL PROTECTION

**Control Parameters:**

Under most handling conditions, this product will not generate mist or dust.

**Engineering Controls:**

In most conditions, no special local ventilation is needed. General ventilation recommended. If the product is heated above 150°C or atomized, ventilation should be used.

**Personal Protective Equipment (PPE):**

**Eyes:**

Safety glasses recommended.

**Skin:**

Impermeable gloves should be worn. Product is compatible with most elastomers.

**Inhalation:**

No respiratory protection required under most conditions. If concentrations exceed exposure limits, approved respiratory equipment must be used.

## SECTION 16. OTHER INFORMATION

NFPA Hazard Classification:

Health:	0
Flammability:	1
Reactivity:	0
Special Hazards:	None

National Fire Protection Association (NFPA) hazard ratings are designed for use by emergency personnel to address the hazards that are presented by short-term, acute exposure to material under conditions of fire, spill, or similar emergencies. Hazard ratings are primarily based on inherent physical and toxic properties of the material but also include the toxic properties of combustion or decomposition products that are known to be generated in significant quantities.

HMIS Hazard Classification:

Health:	0
Flammability:	1
Reactivity:	0
Protection:	B (See PPE section)

Hazardous Material Identification System (HMIS) hazard ratings are designed to inform employees of chemical hazards in the workplace. The ratings are based on inherent properties of the material under expected conditions of normal use and are not intended for use in emergency situations.
